SUMMARY

Systems automation engineer with production experience building hardware validation tooling at scale. Strong background in Linux, Bash, Python, and infrastructure-as-code. Hands-on with Ansible, Terraform, Kubernetes, and self-hosted infrastructure monitoring stacks. Pursuing RHCSA cert; roadmap includes RHCE, Terraform Associate, CKA, CKS, and AWS.

EXPERIENCE

(Senior Test Technician)

TrueNAS | 2021 - 2024

- Built a 22,000+ line Bash/Python automation suite (CC & SWQC) for TrueNAS manufacturing QC
- Automated BIOS, firmware, and HW validation via IPMI and Redfish API for 16+ systems at once
- Developed Python Redfish API clients for BIOS push/export on liquid immersion platforms
- Integrated with PBS archive servers and PostgreSQL to automate burn-in parsing and reporting
- Validated firmware compliance against Redbook specs: ZFS pool status, HBA firmware, SMART health
- Automated multi-node HA pair diffing and generated diff sheets for QC traceability

(Computer Hardware Technician)

EMR CPR/Corovan | 2021

- Reconfigured and relocated desktop/server systems post-migration.
- Troubleshoot hardware/software issues and blueprinted workstation layouts.

(Post Production Specialist)

Freelance | 2016 - 2021

- Managed AV setup, live audio/video services, and video editing.
- Designed and executed digital marketing strategies for SMBs.

(Passenger Service Supervisor)

Pacific Aviation | 2019 - 2021

- Coordinated airline operations and communicated between international teams.

EDUCATION

- Google IT Automation with Python Professional Certificate | Completed
- Google IT Support Professional Certificate | Completed
- Red Hat Certified System Administrator | In Progress
- Online Training | Udemy / Coursera

PROFESSIONAL DEVELOPMENT

IT Support & Services / Advanced IT | JobTrain & StreetCode Academy

- Completed Google IT Support and IT Automation with Python certificates via JobTrain
- Gained hands-on experience through StreetCode Academy repairing and rebuilding systems

SKILLS

- Linux (RHEL, Ubuntu, TrueNAS/FreeBSD)
- Bash & Python Scripting
- Ansible, Terraform
- Docker, Kubernetes (k3s)
- Prometheus, Grafana, Loki
- IPMI, Redfish API
- ZFS, SAS/HBA, BIOS Firmware
- TCP/IP, VLANs, LAGG, WireGuard
- Git, GitHub

PROJECTS

Personal Homelab | github.com/arpatek

- Self-hosted k3s, FreeIPA, WireGuard, and Prometheus/Grafana/Loki stack
- Provisioned via Terraform (XCP-ng) and configured with Ansible
